Services

Odourless Termite Control Pre-Post Construction

Termites from very large colonies which live inside and feed on wood. One of the difficulties which identifying a termite problem is that there can be little evidence of their existence until the timber is weakened to the point of failure.

Piping Method Termite Treatment

Termite Treatment through piping method/Termite tubing system also known as Pipe Reticulation system is a revolutionary system designed to effectively treat the area under concrete slabs or before flooring is done . It is system which is replenishable unlike older termite treatment methods.

Odourless General Pest Control

Spider Bed bugs, red ants and wall lizards are pests that thrives around human dwellings. Though unclean conditions increase their numbers, these insects, because of their dependance on man for food still in the best and cleanest of premise. These insects are repulsive cause diseases by carrying germs on their body and contaminate food. They also interface with personal comfort and can cause social embarrassment. Midas Pest Control Services will do the job thoroughly and efficiently.

Bird Control

PVC UV Rays protected bird nets will be installed against pigeons, sparrow's, Those birds are responsible for the fouling of buildings in towns and cities throughout India. In the Process transmitting diseases to humans.

Wood Borer Treatment

After termites, wood boring beetles are the most important wood destroying insects in homes the amount of damage that Wood boring beetles cause depends on many factors. The type of Wood Hardwood or Softwood, the moisture content of the wood, and the environmental conditions at the infestations site all affect the severity of beetle damage.

Insect Killer Machines

Keep your house and restaurant free from mosquitos, insects and other unwanted pests using the Insect Killer Machine

Thermal and Cold Fogging

The Thermal fogging is a technique widely used in pest control, vector and disinfection routines in the area of public health. This technique differs from other spraying methods. Mainly by the size of droplet size archived through a double process, which simultaneously spray and partially evaporates the formulations through the use of thermo-pneumatic energy.

Bee Hives Removal

The main disadvantage of bees is their painful stings. Fortunately, bees only sting when they feel threatened, such as when protecting their hive from intruders or when accidentally stepped on or squished. Because their stingers are barbed, they often remain inside the skin, releasing more venom and causing additional pain.

Rodent Control

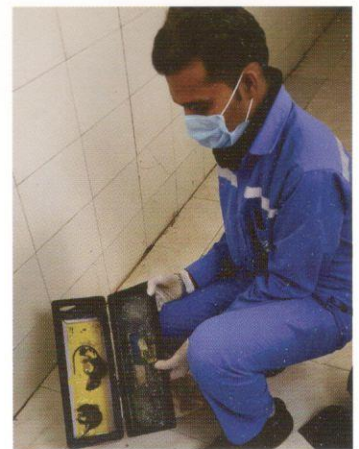

Rat and mice are among the most widespread and cunning of the animals that live on man for their food, shelter, because of the dependency they can sometimes be found even in the best kept premises. They cause epidemics and diseases. Apart from damage and food contamination their presence can cause acute social embarrassment. Rats are intelligent and elusive animals can not be controlled effectively by merely placing trap and poison. Only a few are ever caught and the remaining quickly learns to stay away from these trap and baits. Rat control thus become a very difficult problem and requires the attention of qualified pest control operator.

Our Rat Control Operates on two levels

1. Elimination of existing rats,
2. Preventing future infestation

Specially Designed Fiber Glass Roda Box Glue Trap for Food & Pharma Company

1. Elimination of existing rats,
2. Preventing future infestation

Weed Control

Midas will get rid of nuisance vegetation in and around your tank, Flats, storage yards, gravel area, Fence line and anywhere else. Our objective is to have Zero vegetation.

Garden Treatment

Garden is susceptible to number of disease and insect pests. A pest control Program starts with proper site selection, good soil preparation, good drainage proper spacing, and plant maintenance

Gel Treatment for Cockroaches

Cockroaches Gel treatment - involves applying 1-2 mm dots of Gel to kitchen cupboard hinges and to rear of cupboards, refrigerator this method is considered non-toxic because of the remote chance of exposure to the product itself and as such is the preferred method for people who are sensitive to chemicals and/or have small children or pets residing on the property.
